**DETAILED ACTION**

***Specification***

1. The Copending application section, page 1 of the specification, should be identified with Application Serial Numbers. Please correct them in response to this office action.
2. Examiner also noticed few antecedent basis problems in claim 1, please carefully review all the claims & amend the claims before responding to this office action.

***Election/Restrictions***

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15, drawn to a system comprising a memory, a data processor, and bit access controller classified in class 710, subclass 65.
  - II. Claims 16-19, drawn to a method of implementing modes of data request, classified in class 710, subclass 1+ (claims are too broad to accurately classify).
  - III. Claims 20-22, drawn to a method of accessing data bits using a general processor, classified in class 712, subclass 1+ (claims are too broad to accurately classify).
4. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are

shown to be separately usable. In the instant case, invention I has separate utility such as bit shifting or I/O data modification limitations; invention II, on the other hand, is directed to a data request implementation having modes. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as determining the availability of data bits for the data accessing. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions II (as discussed earlier) has separate utility such as the above discussion. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
